Our Solar System

Prep-c

hydrogen and helium gases

the smallest planet and nearest to the sun

the hottest planet

oxygen, water and atmosphere make it blue planet, we live here

the red planet, red colour is due to rust. carbondioxide gas is there.

the biggest planet, also called gas giant, a very big storm is there.

has 7 (visible) rings made up of dust and ice particles.

made up of water and methane gas, has 13 (not easily visible) rings

coldest and farthest from sun, has 6 (not easily visible) rings
